

FOR A DEVELOPER OR TESTER:

1. Install the prerequisites (Eclipse, Android Sdk, ADT).
2. Install Facebook sdk for android and Facebook api.
3. Import sdk into eclipse.
4. Import the project (application).
5. Run the code while connected to an android device in debugging mode or an AVD.

FACEBOOK AUTHENTICATION:

1. We need to install Eclipse, Android Sdk from android developers' site and also install the android development tool plugins.
2. Download and install Facebook sdk which uses Facebook native application to support authentication.
3. The Facebook sdk installation folder contains directory called Facebook which consists of sample projects which can be imported.
4. We create an android project with Facebook login just like any other android project we need to register the package with Facebook and link to the sdk project.
